

ABSTRACT OF THE INVENTION

A system and method for creating a graphical representation of the major life events that occur in a person's life or within a predetermined period of time. The graphical representation is created using a jigsaw puzzle. The jigsaw puzzle has corner pieces and a plurality of border puzzle pieces that interconnect corner puzzle pieces and form the peripheral frame of the puzzle. A plurality of central puzzle pieces are provided that are connected to the puzzle within the limits of the peripheral frame. At least some of the central puzzle pieces depict different common life events. The puzzle pieces are joined together and the central puzzle pieces are added to the puzzle only after the life event depicted on the various central puzzle pieces occur. This creates a life puzzle of a person's life story.
